

**Why are there missing rows and/or missing data from my IR and pivot tables?  
OR there seems to be missing information from my pivot table. Why is this?**

This is probably due to filters being unintentionally applied. When filters are applied, they limit the amount of data that is displayed. To turn off the filters, you will need to find which filters are being applied and clear them. To do this, click on the filter button and select 'Clear Filter From [Field Name].'
